A player in the knife-making industry since the early 19th century, the company makes knives, cutlery, kitchen utensils and two folding knives.

As a subcontractor for other firms, it also carries out complex manufacturing steps: forging, machining, tooth shaping, polishing, manual steeling, all of which require experience and skill.

It is known nationally and is globally appreciated for the quality of its production (37% of its turnover is generated through exports). Its clientele consists exclusively of companies: professionals, specialised distributors, importers.

The workshop works to order.
