The company produces models for architects, designers, the advertising sector and luxury industries. It has a mastery of a unique, complex know-how in producing models for architecture and cosmetology.

It performs laser cutting, digital machining of 3D parts, polishing, tinting, casting, silk-screen printing, hot-foil stamping, embossing and applying decorations. The complexity of this know-how lies in the mastery of adjusting different materials, producing functional parts and prototypes of bottles with no mating surfaces using casting.

The workshop handles all kinds of materials (metal, resin, Plexiglas, wood) to design and produce models, sometime with lighting and animation.

It has a prestigious international clientele. Some of its products are exhibited at museums.
