For over 30 years, Ateliers Bernard Pictet have been finding answers to all the experts' questions concerning original glass products, whether for feasibility studies or for production and implementation.

Bernard Pictet advises and accompanies all sorts of projects combining glass and art, decoration and architecture. His workshop is unique in its mastery and search for new techniques used in implementing custom-designed decorative projects. Innovation is a key aspect of the firm.

The workshop is especially famous for its creations of materials and motifs, its collaboration with artists and its never-ending curiosity in the search for new aesthetic effects. Furthermore, it has filed two patents – one for obtaining holes drilled parallel to the surface and the other for the production of glass with a kinetic effect.

Its creations can be found at corporate headquarters, luxury

houses and the residences of discriminating customers, museums, major hotels, etc. It exports approximately 60% of its creations. It undertakes projects ranging from table tops to building façades. Its mastery of various techniques enables the workshop to produce components ranging from engraved mirrors from the 1930s, structural glass, partitions, façades and contemporary facings.

It also works in close cooperation with artists for whom it is a sensitive contact who knows how to transpose their work onto glass. It also integrates artistic video into its créations..
