Founded in 1948, Chantier Bretagne Sud specialises in steel structures and shipyards (shipbuilding and marine structures). The company handles the process from A to Z: from design to metal construction to the integration of the boat's propulsion equipment and professional equipment.

It distinguishes itself in the industry by its ability to design and custom build each piece to the customer's request and its ability to manufacture boats of any size including under 15 m.

Its clientele consists mainly of French and foreign authorities in charge of defence and security. Almost a third of orders come from businesses (Ministry of Defence and ports: Lorient, Guyane, Abidjan).
