ColiegeMetalco Emballages was founded in 1930 in Toulouse and specialises in the manufacture of overcap capsules and heat shrink sleeves.

100% of the operations carried out on the company's sites are part of a know-how that can only be acquired through extensive experience in the various activities carried out within the company: metallurgy of tin and aluminium, deep stamping, forming of complex plastic materials, serigraphic and heliographic printing with several colours, mastery of analysis techniques and colorimetric and water-based paint tests.

Its clientele consists exclusively of business customers (wine growers, cooperative cellars, wine syndicates, traders, cosmetics manufacturers and care products for sleeves). A quarter of its clients are international. Notable customers include: Domaine Romanée Conti, Château Miraval, Château Smith Haut Laffite, Château Angelus, Château Léoville Poyferré, etc.

For five generations, the Laffite family has worked to develop its activities in the service of wine and spirits professionals.
