Carrafont specialises in prototypes and models for the biggest names in the world of cosmetics, perfumes and luxury goods, factories and designers. Its works are also exhibited at the Cité de l'Architecture with a collection of Corian and metal houses. It implements all production operations with modern tools, the addition of manual finishing, traditional turning and painting finishing.

The company works on a to-order basis.

It conducts research for innovation in materials, textures, patterns and colours.

The painters create their own mix of colours for their clients to achieve the desired nuances or effects (chocolate effect, faux marble, false wood, false inclusion and gradients of transparent hue on PMMA etc.)

Carrafont accompanies large cosmetics groups in the development of their products, with the contribution of expertise in terms of equipment and know-how.

It has an established and renowned clientele and presents models at prestigious exhibitions.
