The company, which was created in 1993, specialises in the manufacture of roofing, paving and decorative slates for example for kitchen worktops and basins.

The company carries out all operations from cutting to shaping and finishing. Some of the raw materials are extracted on site.

The company stands apart in its field for its use of the diamond wire saw for which it won the Artinnov prize in 2002. The cutting of blocks and shaping of decorative pieces by hand require a high level of technical skill and experience.

Its customers comprise private individuals, professionals (architects, companies) and local authorities.
